

Battle of Neighbourhoods – Capstone Project

THE PURPOSE OF THIS CAPSTONE PROJECT IS TO HELP PEOPLE IN EXPLORING BETTER FACILITIES AROUND THEIR NEIGHBORHOOD & HELP PEOPLE MAKING SMART AND EFFICIENT DECISION ON SELECTING GREAT NEIGHBORHOOD OUT OF NUMBERS OF OTHER NEIGHBORHOODS IN NORTH YORK, TORONTO.

1. Introduction:

The purpose of this Capstone Project is to help people in exploring better facilities around their neighborhood. It will help people making smart and efficient decision on selecting great neighborhood out of numbers of other neighborhoods in North York, Toronto.

Lots of people are migrating to various states of Canada and needed lots of research for good housing prices and reputed schools for their children. This project is for those people who are looking for better neighborhoods. For ease of accessing to Cafe, School, Super market, medical shops, grocery shops, mall, theatre, hospital, like minded people, etc.

This Capstone Project aim to create an analysis of features for a people migrating to North York to search a best neighborhood as a comparative analysis between neighborhoods. The features include median housing price and better school according to ratings, crime rates of that particular area, road connectivity, weather conditions, good management for emergency, water resources both fresh and waste water and excrement conveyed in sewers and recreational facilities.

It will help people to get awareness of the area and neighborhood before moving to a new city, state, country or place for their work or to start a new fresh life.

2. Data Section

Data Link: https://en.wikipedia.org/wiki/List_of_postal_codes_of_Canada:_M

Will use Scarborough dataset which we scrapped from wikipedia on Week 3. Dataset consisting of latitude and longitude, zip codes.

Foursquare API Data:

We will need data about different venues in different neighborhoods of that specific borough.

In order to gain that information we will use “Foursquare” locational information. Foursquare is a location data provider with information about all manner of venues and events within an area of interest. Such information includes venue names, locations, menus and even photos. As such, the foursquare location platform will be used as the sole data source since all the stated required information can be obtained through the API.

After finding the list of neighborhoods, we then connect to the Foursquare API to gather information about venues inside each and every neighborhood. For each neighborhood, we have chosen the radius to be 700 meter.

The data retrieved from Foursquare contained information of venues within a specified distance of the longitude and latitude of the postcodes. The information obtained per venue as follows:

- | | | | |
|--------------------------|---|-------------------|--------------------|
| 1. Neighborhood | 3. Neighborhood Longitude | 6. Venue Latitude | 7. Venue Longitude |
| 2. Neighborhood Latitude | 4. Venue | | |
| 8. Venue Category | 5. Name of the venue e.g. the name of a store or restaurant | | |

3. Methodology Section

Clustering Approach:

To compare the similarities of two cities, we decided to explore neighborhoods, segment them, and group them into clusters to find similar neighborhoods in a big city like New York and Toronto. To be able to do that, we need to cluster data which is a form of unsupervised machine learning: k-means clustering algorithm.

Using K-Means Clustering Approach | Most Common Venue

K means Clusters, K=10

Battle of neighbourhoods Capstone Project (autosaved) Logout

File Edit View Insert Cell Kernel Widgets Help Trusted Python 3

```
In [71]: neighborhoods_venues_sorted.insert(0, 'Cluster Labels', kmeans.labels_)
North_York_merged = df_2.iloc[:16,:]

# merge toronto_grouped with toronto_data to add latitude/longitude for each neighborhood
North_York_merged = North_York_merged.join(neighborhoods_venues_sorted.set_index('Neighborhood'), on='Neighborhood')
North_York_merged.head()# check the last columns!
```

Out[71]:

Neighborhood	Latitude	Longitude	Cluster Labels	1st Most Common Venue	2nd Most Common Venue	3rd Most Common Venue	4th Most Common Venue	5th Most Common Venue	6th Most Common Venue	7th Most Common Venue	8th Most Common Venue	9th Most Common Venue	10th Most Common Venue
Hillcrest Village	43.80225	-79.35558	2	Park	Bakery	Chinese Restaurant	Pharmacy	Residential Building (Apartment / Condo)	Food & Drink Shop	Flower Shop	Fast Food Restaurant	Falafel Restaurant	Electronics Store
Fairview, Henry Farm, Oriole	43.78097	-79.34781	0	Clothing Store	Coffee Shop	Fast Food Restaurant	Women's Store	Juice Bar	Bakery	Shoe Store	Restaurant	Toy / Game Store	Cosmetics Shop
Bayview Village	43.78112	-79.38060	2	Gas Station	Asian Restaurant	Trail	Flower Shop	Park	Yoga Studio	Falafel Restaurant	Food Court	Food & Drink Shop	Fast Food Restaurant
York Mills, Silver Hills	43.75698	-79.38060	2	Concert Hall	Park	Yoga Studio	Fried Chicken Joint	Department Store	Dessert Shop	Dim Sum Restaurant	Diner	Discount Store	Electronics Store
Willowdale, Newtonbrook	43.79182	-79.41372	0	Korean Restaurant	Middle Eastern Restaurant	Coffee Shop	Café	Pizza Place	Japanese Restaurant	Shopping Mall	Indian Restaurant	Gym	Grocery Store

```
In [72]: North_York_merged.shape
Out[72]: (16, 16)
```

12:46 PM 10/24/2020

Work Flow:

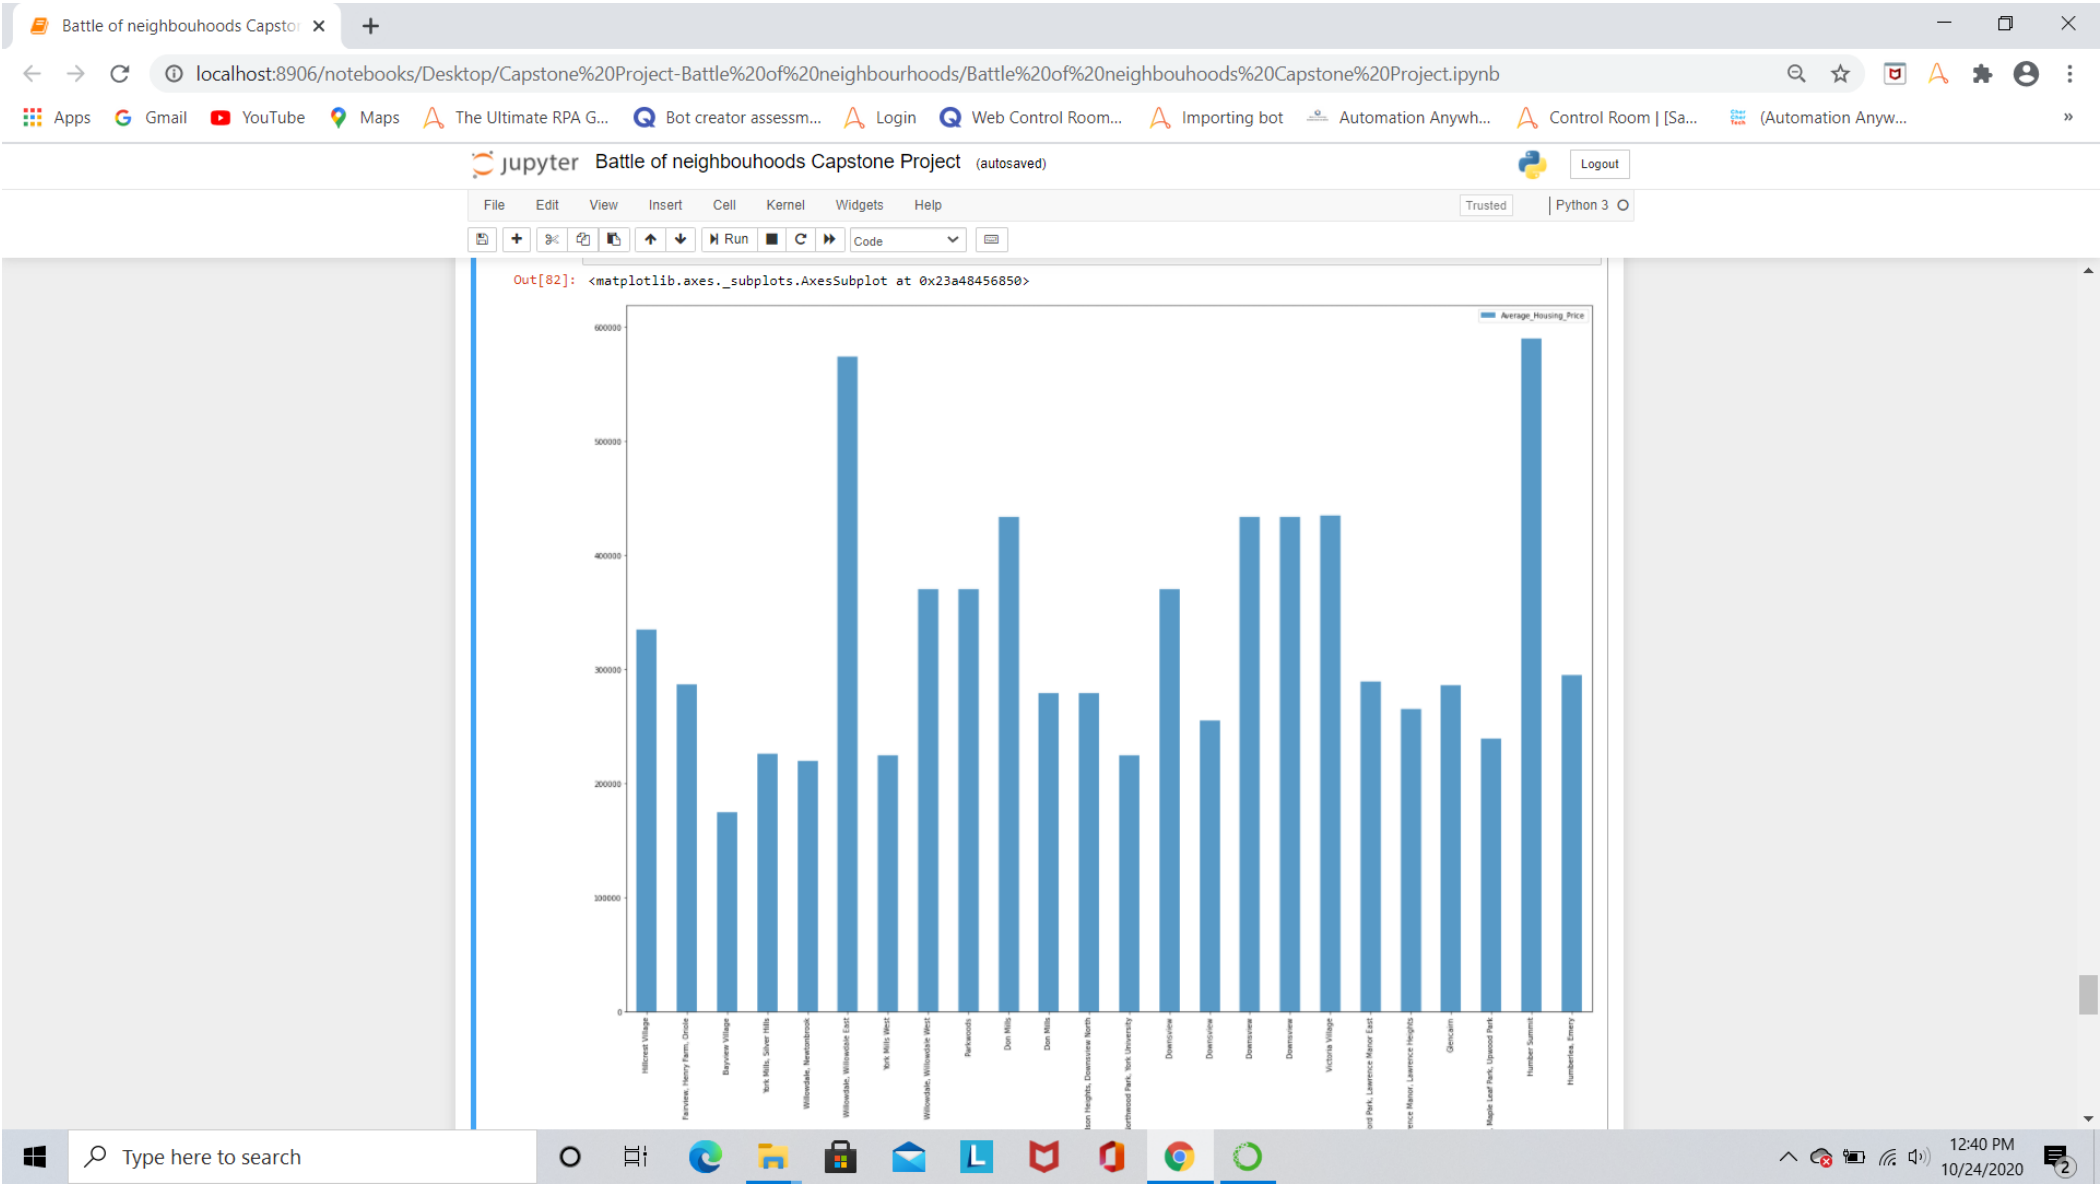

Using credentials of Foursquare API features of near-by places of the neighborhoods would be mined. Due to http request limitations the number of places per neighborhood parameter would reasonably be set to 100 and the radius parameter set to 700.

4. Results Section

[illegible]

The Location:

North York is a popular destination for new immigrants in Canada to reside. As a result, it is one of the most diverse and multicultural areas in Toronto, being home to various religious groups and places of worship. Although immigration has become a hot topic over the past few years with more governments seeking more restrictions on immigrants and refugees, the general trend of immigration into Canada has been one of on the rise.

Foursquare API:

This Capstone project have used Four-square API as its prime data gathering source as it has a database of millions of places, especially their places API which provides the ability to perform location search, location sharing and details about a business.

5. Discussion Section

Problem Which Tried to Solve:

The major purpose of this project, is to suggest a better neighborhood in a new city for the person who are shifting there. Social presence in society in terms of like minded people. Connectivity to the airport, bus stand, city center, markets and other daily needs things nearby.

- Sorted list of house in terms of housing prices in a ascending or descending order
- Sorted list of schools in terms of location, fees, rating and reviews

6. Conclusion Section

In this Capstone project, using k-means cluster algorithm I separated the neighborhood into 10(Ten) different clusters and for 103 different latitude and logitude from dataset, which have very-similar neighborhoods around them. Using the charts above results presented to a particular neighborhood based on average house prices and school rating have been made.

I feel rewarded with the efforts and believe this course with all the topics covered is well worthy of appreciation. This project has shown me a practical application to resolve a real situation that has impacting personal and financial impact using Data Science tools.

The mapping with Folium is a very powerful technique to consolidate information and make the analysis and decision better with confidence.

Future Works:

This Capstone project can be continued for making it more precise in terms to find best house in North York. Best means on the basis of all required things(daily needs or things we need to live a better life) around and also in terms of cost effective.

Libraries Which are Used to Developed the Project:

Pandas: For creating and manipulating dataframes.

Folium: Python visualization library would be used to visualize the neighborhoods cluster distribution of using interactive leaflet map.

Scikit Learn: For importing k-means clustering.

JSON: Library to handle JSON files.

XML: To separate data from presentation and XML stores data in plain text format.

Geocoder: To retrieve Location Data.

Beautiful Soup and Requests: To scrap and library to handle http requests.

Matplotlib: Python Plotting Module.

Thanks
